

Good Clinical Practice for Social and Behavioral Research eLearning Course

Instructions and Documentation

The 10 eLearning course modules were published with Articulate Storyline 360 - Build 3.88.32474.0 (released 05/28/24) in June 2024, and are published for the following completion/tracking:

- SCORM 1.2
- Passed/Incomplete
- Completion: Requires an 80% passing score on the final assessment (with the exception of the “Conclusion/Wrap-up” module, which marks completion based on viewing all screens within the module)

Uploading Files to a Learning Management System (LMS)

To upload these modules to any LMS:

1. Locate the zipped (compressed) file for the desired module. If a zipped file is not included, create one by compressing the published files.
2. Rename the zipped file using all lowercase letters, no spaces, and no special characters.
3. Upload the zipped file according to your LMS’s instructions.

Important: The modules are designed for SCORM 1.2 tracking/completion and must be uploaded to a shareable content object (SCO) to function correctly. The files listed in the screenshot must remain named and organized as shown, or the module will not play correctly.

Disclaimer: Your LMS may use different terminology. Please check with your LMS administrator if you need help loading the resources.

Accessibility and Resources

- These modules are compatible with the JAWS Screen Reader.
- A hidden navigation menu is included within the course for ease of use with screen reader tabbing.
- Downloadable script and resources are also available within this hidden navigation menu, found in the upper right of each screen.

To replace or change any resources (attachments) within the course (without republishing):

1. Navigate to the story_content > external files folder.
2. Replace the files using the same naming convention.

Note: The zipped file in the external files folder contains all the resources for the 508-compliant menu. This zipped folder must also be updated and replaced if any changes are made.
